LEARNING, TEACHING AND ASSESSMENT INFORMATION

6a. Module Description

The ability to manage projects effectively is widely regarded as a key aspect of management in both private and public sector organisations. This module considers the nature of the project environment, the role adopted by the project manager and the relationships between projects and the objectives of the sponsoring organisation. Throughout the module reference is made to the practical tools and techniques which underpin the activities of the project manager and support the core objectives of the project. Tutorial exercises and case studies support this approach. Students are given hands-on experience of PC software tools - deployed to facilitate planning, costing, critical path analysis (CPA) and resource management. Subsequent PC-based activities include optimisation, progress monitoring, trouble-shooting and rescheduling. One of the main focuses for the design of this module has been the further development of relevant employability and professional skills. Such skills are implicit in the learning outcomes. Multiculturalism has been considered during the design of this module and will be considered when the assessment brief is written.
