Courses to which this module is restricted:			

LEARNING, TEACHING AND ASSESSMENT INFORMATION

6a. Module Description

This module introduces the core principles of financial analysis and management within a business context. You will gain a practical understanding of financial reporting and management accounting, learning how to interpret financial statements and assess business performance. The module also develops your ability to analyse and present financial data using Microsoft Excel, supporting informed decision-making through evidence-based analysis. Key concepts are explored from both a theoretical and applied perspective, with a strong focus on the development of analytical, digital, and employability skills.

6b. Outline Content

You will learn how to understand, analyse and apply financial and management information in a variety of business settings. The module begins with the fundamentals of accounting and financial reporting, helping you build confidence in interpreting financial statements. You will then be introduced to key tools used to assess performance and support decision-making, with a particular emphasis on management accounting techniques.

You will also develop essential data analysis skills, including the use of descriptive statistics, forecasting methods and regression analysis. Throughout the module, you will work with spreadsheet-based tools, particularly Microsoft Excel, to apply these techniques to real-world business data.

The module is designed to strengthen your problem-solving abilities, numerical reasoning and digital literacy — transferable skills that are highly valued across all areas of business.

6c. Key Texts/Literature

The reading list to support this module is available at: <https://readinglists.aru.ac.uk/>

6d. Specialist Learning Resources

Microsoft Excel

7. Learning Outcomes (threshold standards)

No.	Type	On successful completion of this module the student will be expected to be able to:
