LEARNING, TEACHING AND ASSESSMENT INFORMATION

6a. Module Description
<p>Global Political Economy examines the complex relationship between politics and economics at the international level. It explores how political decisions shape economic outcomes, how economic forces influence political structures, and how power is distributed among states, institutions, and corporations within the global system. This module provides you with the analytical tools to understand the historical development of global capitalism, the role of state power and hegemony, and the influence of key global and regional institutions such as the International Monetary Fund, World Trade Organisation, European Union, and African Union.</p> <p>You'll engage critically with a range of theoretical frameworks, including varieties of capitalism or growth models, and assess the logics and limitations of globalisation and financialisation. You'll also investigate the impact of trade and economic integration on inequality and development and look at the decolonial approaches that challenge dominant narratives and foreground perspectives from the Global South. In its final stages, the module considers contemporary transformations in global political economy, including the reassertion of state-led strategies and shifting global power dynamics.</p> <p>By the end of the module, you'll have developed the knowledge and skills necessary to analyse international trade, global finance, and policy-making in context, preparing you for further academic study or careers in policy analysis, consultancy, international organisations, and related fields.</p>
